

HACKATOPIA 2K26

FINAL PRESENTATION — NATIONAL-LEVEL HACKATHON

1. Problem Understanding

- Exact problem statement / ID & title
- What is the problem and who is affected?
- Why does it matter?
- 1–2 strong supporting statistics / data points
- Current real-world situation

2. Existing Solutions & Problem Gap

- What is already being done?
- Existing approaches / solutions
- Current pain points and limitations
- Where do existing approaches fall short?
- Clearly state the identified gap

3. Proposed Solution

- Solution overview and core approach
- How the solution directly solves the problem
- Input → Processing → Output
- One clear solution diagram

4. Innovation & Unique Value Proposition

- What is genuinely new or improved?
- What makes it different from existing alternatives?
- Unique Value Proposition (USP)
- Why should users choose this solution?

HACKATOPIA 2K26

FINAL PRESENTATION — NATIONAL-LEVEL HACKATHON

5. How the Solution Works

- Show the complete workflow / user journey
- User → Input → Processing → AI / Logic → Database / API → Result → Action
- Show important decision points and user interactions

6. Technology Stack

- Frontend • Backend • AI / ML • Database
- Cloud / APIs
- Be ready to justify the major technology choices

7. System Architecture

- Show how the major components communicate
- Keep the architecture understandable within a few seconds

8. Technical Feasibility & Implementation

- Can it actually be built?
- Implementation approach
- 24-hour development strategy / milestones
- Major technical challenges
- Mitigation / fallback approach
- Prototype / demo status

HACKATOPIA 2K26

FINAL PRESENTATION — NATIONAL-LEVEL HACKATHON

9. Future Scope

- Future features and enhancements
- Additional integrations / AI improvements
- Expansion to more languages, users or locations
- Long-term deployment possibilities

10. Conclusion

- One strong key takeaway
- Three strongest benefits
- Final vision / long-term impact

FINAL JUDGING CRITERIA

No.	Evaluation Criterion	Max Score	What Judges Evaluate
1	Problem & Solution Relevance	15	Clarity and significance of the problem, understanding of target users, and how effectively the final solution addresses the identified need.
2	Innovation & Originality	20	Originality, creativity, meaningful differentiation, novelty, and whether the solution provides a genuinely new or improved approach.
3	Technical Excellence & Implementation	25	Technical soundness, architecture, technology choices, integration, code quality, reliability/security where relevant, completeness, and quality of implementation.
4	Real-World Impact & Scalability	15	Potential real-world value, practical deployment, scalability, sustainability, and potential for further development or adoption.
5	Live Demo & Solution Effectiveness	15	Working functionality, demonstration quality, performance, completeness of the solution, and how effectively the product solves the stated problem.
6	Pitch & Q&A / Defense	10	Clarity and confidence of communication, depth of understanding, ability to explain and defend technical/product decisions, and quality of responses to judges.
	TOTAL	100	

Total: 100 marks — Final prize ranking is based on the final pitching score.
